Passage 1: The History of Method Acting

Method acting is a range of training and rehearsal techniques that seek to encourage sincere and emotionally expressive performances. It was first popularized by the Group Theatre in the 1930s and later developed by Lee Strasberg at the Actors Studio in New York. The approach draws from the system developed by Russian theatre practitioner Konstantin Stanislavski. Strasberg's method requires actors to draw upon their own emotions and memories to connect with their characters. This technique became famous through actors like Marlon Brando, James Dean, and Marilyn Monroe. While some critics argue that method acting can be psychologically damaging, its proponents believe it creates unparalleled authenticity. The technique involves extensive character research, emotional memory exercises, and sometimes extreme physical transformations. Many contemporary acting schools continue to teach variations of method acting, though often with modifications to address concerns about actors' mental health. The legacy of method acting continues to influence film and theater worldwide, with many award-winning performances attributed to this approach.

Passage 2: Shakespeare's Globe Theatre

The Globe Theatre was a theatre in London associated with William Shakespeare. It was built in 1599 by Shakespeare's playing company, the Lord Chamberlain's Men, and was destroyed by fire on 29 June 1613. A second Globe Theatre was built on the same site by June 1614 and closed in 1642. The modern reconstruction, named 'Shakespeare's Globe', opened in 1997 approximately 230 meters from the original site. The original Globe could accommodate up to 3,000 spectators and was famous for its circular shape and open-air design. Plays were performed in the afternoon to take advantage of natural light. The theatre had three levels of seating and a yard where 'groundlings' (commoners) stood for a penny. The stage extended into the yard, creating an intimate relationship between actors and audience. Sound effects were created using cannons, bells, and other props, which ironically caused the fire that destroyed the first Globe when a cannon misfired during a performance of Henry VIII. Today, Shakespeare's Globe attracts visitors from around the world and continues to stage productions using original practices, including period costumes and minimal sets.

Passage 3: The Evolution of Women in Theater

The role of women in theater has evolved significantly throughout history. In ancient Greek theater, all roles were played by men, including female characters who were portrayed by male actors wearing masks. During the Renaissance, women were still banned from the stage in England, leading to young boys playing female roles in Shakespeare's plays. The first professional actresses appeared in Italy during the 16th century in commedia dell'arte troupes. In England, women finally began appearing on stage after the Restoration of Charles II in 1660, with Margaret Hughes often credited as the first professional actress on the English stage. The 19th century saw the rise of famous actresses like Sarah Bernhardt, known as 'the divine Sarah,' who achieved international stardom. The 20th century brought further progress with women not only acting but also writing, directing, and

producing plays. Playwrights like Lillian Hellman and Caryl Churchill broke barriers with powerful works addressing social issues. Today, women hold prominent positions across all aspects of theater, though gender inequality and representation issues persist. Contemporary movements continue to advocate for equal opportunities and diverse representation both on stage and behind the scenes in theaters worldwide.

Writing

Writing Task 1

Prompt: undefined

The line graph illustrates theater attendance percentages across different age groups in London from 2010 to 2020. Overall, attendance patterns varied significantly between age groups, with older adults showing the highest rates initially, though trends shifted over the decade.

The 51-65 age group had the highest attendance in 2010 at 65%, but this declined to 62% by 2015 and further dropped to 58% by 2020. Similarly, those over 65 saw attendance decrease from 48% in 2010 to 42% in 2020.

Conversely, the 26-35 and 36-50 age groups showed increasing trends. The 26-35 group rose from 45% to 52%, while the 36-50 group increased from 55% to 62%,

becoming the highest attending group by 2020. The 18-25 age group fluctuated, peaking at 42% in 2015 before declining to 38% in 2020.

In summary, older age groups experienced declining attendance, while middle-aged groups showed growth, with the 36-50 group achieving the highest attendance by the end of the period.

Writing Task 2

Prompt: undefined

The debate over whether acting is an innate talent or a skill that can be learned has persisted for decades in the performing arts world. Both perspectives offer compelling arguments, and I believe the truth lies in a combination of both factors.

Those who argue that acting is purely natural talent point to certain individuals who seem to possess an innate ability to embody characters and evoke emotions effortlessly. These actors often display an instinctive understanding of human behavior and can connect with audiences in ways that appear almost magical. However, even natural talent requires refinement and technique to reach professional standards.

On the other hand, proponents of acting as a learned skill emphasize the rigorous training programs at prestigious drama schools and the years of practice required to master techniques like voice projection, stage movement, and character development. Historical evidence supports this view, as many acclaimed actors have credited their success to extensive training rather than natural ability alone.

In my opinion, while some individuals may possess natural inclinations toward performance, acting is fundamentally a craft that benefits enormously from structured learning and continuous practice. The most successful actors combine natural empathy and expressiveness with technical skills developed through training. Therefore, I believe that acting can be taught, but those with natural talent may progress more quickly, while dedicated learners can achieve excellence through perseverance and proper instruction.
