IELTS Level 4.6 Advanced Sports Science & Management Test - Randomized Answers - Test Results

Submission ID: mhx6vsyaf09lc0drb4m

Test Date: 2025-11-05

Submission Date: November 13th 2025, 3:50:55 pm

Test Summary

Grammar & Vocabulary:	6/20 (Band 3)
Reading:	8/30 (Band 3.5)
Listening:	7/40 (Band 3.5)
Writing:	15/20 (Band 7)
Overall IELTS Band Score:	**4**
Total Raw Score:	32.73/100
Time Spent:	41:16

Grammar & Language Use

Question 1

_____ comprehensive the training program, its effectiveness ultimately depends on athlete compliance and recovery management.

A) However

B) Although

C) Despite

D] Because

Explanation: Concession with adjective

Question 2

The performance strategy, _____ on extensive physiological testing, demonstrated remarkable results during the competition season.

A) predicated

B) predicating

C) having predicated

D] being predicated

Explanation: Past participle in reduced relative clause

Question 3

So profound _____ that traditional coaching methods struggle to address its implications.

A) has the sports science revolution been

B) the sports science revolution has been

C) was the sports science revolution

D] the sports science revolution was

Explanation: Inversion after 'so + adjective'

Question 4

The coaching committee recommended that psychological preparation _____ integrated into all training phases.

A) be placed

B] is placed

C) was placed

D] has been placed

Explanation: Subjunctive after verbs of recommendation

Question 5

_____ the complex interdependencies of athletic performance, minor technical adjustments can have significant competitive implications.

A) Given

B) Giving

C) To give

D] Having given

Explanation: Preposition meaning 'considering'

Question 6

The high-performance system, _____ multiple sports disciplines and support services, has become a model for athlete development.

A] comprising

B] comprised

C] having comprised

D] being comprised

Explanation: Present participle in reduced relative clause

Question 7

So rapidly _____ that traditional training周期 struggle to adapt.

A] is sports technology advancing

B] sports technology is advancing

C] has sports technology advanced

D] sports technology has advanced

Explanation: Inversion after 'so + adverb'

Question 8

The sports federation insisted that anti-doping protocols _____ strictly enforced across all competitions.

A] be

B] are

C] were

D] have been

Explanation: Subjunctive after verbs of demand

Question 9

_____ the prevailing training philosophies, evidence-based practice continues to demonstrate superior outcomes.

A] Notwithstanding

B] Besides

C] Moreover

D] Therefore

Explanation: Formal preposition meaning 'despite'

Question 10

The athletic development pathway, _____ over decades of research, has transformed talent identification systems.

A] forged

B] forging

C] having forged

D] being forged

Explanation: Past participle in reduced relative clause

Question 11

So significant _____ that it has redefined athletic preparation.

A] has the advancement in recovery science been

B] the advancement in recovery science has been

C] was the advancement in recovery science

D] the advancement in recovery science was

Explanation: Inversion after 'so + adjective'

Question 12

The international sports body demanded that safety standards _____ uniformly applied.

A] be ensured

B] is ensured

C] was ensured

D] has been ensured

Explanation: Subjunctive after verbs of demand

Question 13

_____ the sophisticated monitoring technology, predicting athletic performance remains inherently complex.

A] Despite

B] Although

C] Because of

D] However

Explanation: Preposition for contrast

Question 14

The training methodology, _____ to optimize athletic potential, requires continuous refinement.

A] designed

B] designing

C] having designed

D] being designed

Explanation: Past participle in reduced relative clause

Question 15

So complex _____ that traditional coaching approaches have proven inadequate.

A] have modern athletic demands become

B] modern athletic demands have become

C] became modern athletic demands

D] modern athletic demands became

Explanation: Inversion after 'so + adjective'

Question 16

The sports agreement requires that ethical standards _____ consistently maintained.

A] be

B] are

C] were

D] have been

Explanation: Subjunctive after verbs of requirement

Question 17

_____ the detailed performance analysis, implementation challenges persisted.

A] Notwithstanding

B] Besides

C] Moreover

D] Therefore

Explanation: Formal preposition meaning 'despite'

Question 18

The coaching methodology, _____ on motor learning principles, has achieved remarkable skill acquisition.

A] predicated

B] predicating

C] having predicated

D] being predicated

Explanation: Past participle in reduced relative clause

Question 19

So rapidly _____ that traditional development systems have struggled to adapt.

A] is the sports landscape evolving

B] the sports landscape is evolving

C] has the sports landscape evolved

D] the sports landscape has evolved

Explanation: Inversion after 'so + adverb'

Question 20

The sports reform package mandates that youth development _____ prioritized across all programs.

A] be

B] are

C] were

D] have been

Explanation: Subjunctive after verbs of mandate

Reading

Passage 1: The Science of Sports Nutrition and Recovery

The science of sports nutrition represents a fundamental shift in understanding the determinants of athletic performance and recovery. Sports nutrition differs from conventional nutrition in its focus on timing, composition, and individualization of nutrient intake to support training adaptation and competition performance. These considerations create complex nutritional strategies that must address energy systems, hydration status, and micronutrient requirements. Periodized nutrition conceptualizes nutrient intake as a dynamic process aligned with training phases—building, peaking, tapering, and recovery—connected through physiological principles. The metabolic flexibility of athletes determines their ability to utilize different fuel sources efficiently, highlighting the importance of nutritional periodization and training adaptation. The timing of nutrient intake exhibits critical windows for optimization, with nutrient sensitivity varying across training contexts, explaining the importance of personalized nutrition strategies despite general guidelines. The technological transformation has created new nutritional monitoring challenges related to biometric tracking, supplement quality, and dietary adherence. Personalized nutrition and genetic testing challenge traditional dietary approaches, emphasizing individual metabolic responses and nutritional needs. The science of recovery nutrition introduces novel considerations regarding nutrient timing, supplementation efficacy, and the interaction between nutrition and sleep. Understanding sports nutrition requires analyzing not only the composition of diets but also their timing, individual response, and integration with training through comprehensive performance planning.

Question reading-q1

What represents a fundamental shift in understanding performance?

A) A) Science of sports nutrition

B) B) Traditional nutrition

C) C) Basic dietetics

D) D] General health

Question reading-q2

What characteristics create complex strategies?

A) A) Timing and composition

B) B) Basic nutrients

C) C) Simple guidelines

D) D] General principles

Question reading-q3

What conceptualizes nutrition as dynamic process?

A) A) Periodized nutrition

B) B) Basic diet planning

C) C) Standard guidelines

D) D] Traditional approaches

Question reading-q4

What determines ability to use fuel sources?

A) A) Metabolic flexibility

B) B) Basic metabolism

C) C) General health

D) D] Training volume

Question reading-q5

What exhibits critical optimization windows?

A) A) Nutrient timing

B) B) Basic eating

C) C] General nutrition

D) D] Standard meals

Question reading-q6

What has created new monitoring challenges?

A) A) Technological transformation

B) B) Basic science

C) C] Traditional methods

D) D] Simple tracking

Question reading-q7

What challenges traditional dietary approaches?

A) A) Personalized nutrition

B) B) Standard diets

C) C] Basic guidelines

D) D] General recommendations

Question reading-q8

What introduces novel considerations about timing?

A) A) Recovery nutrition science

B) B] Basic nutrition

C) C] Traditional eating

D) D] General health

Question reading-q9

What requires analyzing timing and response?

A) A) Understanding sports nutrition

B) B] Basic diet planning

C) C] General health

D) D] Simple eating

Question reading-q10

What integrates nutrition with training?

A) A) Performance planning

B) B] Basic scheduling

C) C] Simple programs

D) D] General advice

Passage 2: Biomechanics and Movement Efficiency

Sports biomechanics integrates insights from physics and engineering to enhance understanding of human movement in athletic contexts. Traditional coaching often relied on observational analysis and experiential knowledge, but biomechanics reveals systematic movement patterns and efficiency principles through quantitative analysis. Movement itself creates complex mechanical demands that influence performance, creating technical optimization opportunities where precise measurement and analysis can identify improvement areas. Force production and transmission determine movement efficiency, while energy conservation principles inform technical refinement. Movement preferences including individual anatomical variations and motor learning histories influence skill acquisition and technical development. Neuromuscular coordination—the integration of neural commands and muscular responses—shapes movement quality and can be optimized through targeted training, affecting technique mastery, injury prevention, and performance enhancement. Technology-based movement analysis has demonstrated success in improving technical efficiency, reducing injury risk, and enhancing performance outcomes by providing objective feedback. However, biomechanical approaches face limitations in addressing individual learning styles and psychological factors. The integration of biomechanical insights with traditional coaching offers a more comprehensive understanding of movement optimization and more effective technical instruction. This requires individualized assessment and careful attention to the interaction between technical models and individual characteristics. Sports biomechanics ultimately aims to enhance performance by working with human movement as it is, rather than as traditional models assume it should be.

Question reading-q11

What integrates insights from physics?

A) A) Sports biomechanics

B) B) Traditional coaching

C) C) Basic training

D) D] General exercise

Question reading-q12

What reveals systematic movement patterns?

A) A) Biomechanics

B) B] Observation

C) C] Experience

D) D] Intuition

Question reading-q13

What creates technical optimization opportunities?

A) A) Movement demands

B) B] Basic skills

C) C] Simple actions

D) D] Natural talent

Question reading-q14

What determines movement efficiency?

A) A) Force production

B) B] Basic strength

C) C] Natural ability

D) D] Simple coordination

Question reading-q15

What influences skill acquisition?

A) A) Movement preferences

B) B] Basic learning

C) C] Simple practice

D) D] Natural progression

Question reading-q16

What shapes movement quality through integration?

A) A) Neuromuscular coordination

B) B] Basic nerves

C) C] Simple muscles

D) D] Natural movement

Question reading-q17

What has demonstrated success in improvement?

A) A) Technology-based analysis

B) B] Basic observation

C) C] Simple feedback

D) D] Natural learning

Question reading-q18

What do biomechanical approaches face limitations in addressing?

A) A) Learning styles

B) B] Basic movements

C) C] Simple techniques

D) D] Natural abilities

Question reading-q19

What offers more comprehensive understanding?

A) A) Integration with coaching

B) B] Basic science

C) C] Simple methods

D) D] Traditional approaches

Question reading-q20

What does biomechanics aim to work with?

A) A) Human movement as it is

B) B] Ideal movement

C) C] Basic patterns

D) D] Simple actions

Passage 3: Sports Economics and Business Management

Sports economics examines the business dimensions of sports organizations and the economic impact of sporting events, focusing on revenue generation, cost management, and value creation in sports contexts. Sports businesses typically operate in unique market structures with media rights, sponsorship agreements, and ticketing revenues creating complex financial ecosystems. This market specialization explains the distinctive business models in sports industries. Organizational structures—where multiple stakeholders including owners, leagues, and broadcasters interact—can create both synergies and conflicts in sports business operations. Economic principles and market dynamics shape how sports organizations generate revenue and manage costs. The timing and scale of investments crucially influence financial sustainability, with major expenditures often concentrated in player acquisition and facility development when market conditions are favorable. Revenue sharing mechanisms that distribute income across organizations can enhance competitive balance, though they may reduce individual team incentives. The credibility of financial management affects organizational stability, as stakeholders may not support sports organizations if they doubt their fiscal responsibility. External factors including broadcast agreements, sponsorship markets, and economic conditions influence sports business operations but cannot substitute for sound management principles. Successful sports business strategies typically combine commercial

acumen with sports understanding, building sustainable revenue streams while managing costs through efficient operations, strategic partnerships, and diversified income sources. Understanding sports economics is essential for designing viable sports organizations that achieve both competitive success and financial sustainability.

Question reading-q21

What examines business dimensions of sports?

A) A) Sports economics

B) B] Basic business

C) C] Traditional management

D) D] Simple finance

Question reading-q22

What problem explains distinctive business models?

A) A) Market specialization

B) B] Basic operations

C) C] Simple structures

D) D] Traditional approaches

Question reading-q23

What can create synergies and conflicts?

A) A) Organizational structures

B) B] Basic management

C) C] Simple operations

D) D] Traditional systems

Question reading-q24

What shape revenue generation?

A) A) Economic principles

B) B] Basic rules

C) C] Simple guidelines

D) D] Traditional methods

Question reading-q25

When are major expenditures often concentrated?

A) A) During favorable conditions

B) B] During basic operations

C) C] During simple planning

D) D] During traditional cycles

Question reading-q26

What can enhance competitive balance?

A) A) Revenue sharing

B) B] Basic distribution

C) C] Simple allocation

D) D] Traditional sharing

Question reading-q27

What affects organizational stability?

A) A) Financial management credibility

B) B] Basic accounting

C) C] Simple budgeting

D) D] Traditional finance

Question reading-q28

What cannot substitute for sound management?

A) A) External factors

B) B] Basic conditions

C) C] Simple elements

D) D] Traditional influences

Question reading-q29

What do successful strategies combine?

A) A) Commercial acumen and sports understanding

B) B] Basic business and simple sports

C) C] Traditional management and basic knowledge

D) D] Simple finance and general understanding

Question reading-q30

What is essential for designing viable organizations?

A) A) Understanding sports economics

B) B] Basic business knowledge

C) C] Simple management

D) D] Traditional approaches

Listening

Part 1: Discussion about sports science and athlete performance

Script: {"narrator":"Good morning. This is the International English Language Testing System, IELTS. You will hear a number of different recordings and you will have to answer questions on what you hear. Ther...

Question listening-q1

What has demonstrated limitations according to the speakers?

A) A) Traditional athlete development

B) B) Modern training methods

C) C) Technological approaches

D) D] Psychological training

Question listening-q2

What failed to account for long-term development?

A) A) Early specialization

B) B) Holistic approaches

C) C) Diversified training

D) D] Recovery strategies

Question listening-q3

What does the modern development model still operate within?

A) A) Performance-driven framework

B) B) Health-focused framework

C) C) Educational framework

D) D] Recreational framework

Question listening-q4

What demonstrates the importance of diversified participation?

A) A) Scandinavian programs

B) B) American systems

C) C) Asian models

D) D] European approaches

Question listening-q5

What concept provides insights about athlete evolution?

A) A) Talent transfer

B) B) Genetic selection

C) C) Early identification

D) D] Systematic training

Question listening-q6

What creates both opportunities and constraints?

A) A) Development pathways

B) B) Training facilities

C) C) Coaching methods

D) D] Competition schedules

Question listening-q7

What dual challenge do coaches face?

A) A) Traditional and technological integration

B) B) Physical and mental training

C) C) Individual and team development

D) D] Short-term and long-term planning

Question listening-q8

What approach is no longer viable?

A) A) Train hard, recover later

B) B) Periodized training

C) C) Balanced development

D) D] Scientific approach

Question listening-q9

What should sports scientists facilitate instead of focusing on metrics?

A) A) Development processes

B) B) Competition results

C) C) Training intensity

D) D] Technical skills

Question listening-q10

What must athlete development balance?

A) A) Performance excellence and personal development

B) B) Training and competition

C) C) Individual and team goals

D) D] Physical and technical skills

Part 2: Lecture on sports technology and performance analytics

Script: {"narrator":"Now turn to Part 2. You will hear a lecture on sports technology and performance analytics. Look at questions 11 to 20. You now have some time to look at the questions.\n\n[Pause]\n\nNow ...

Question listening-q11

What represents significant transformation in sports?

A) A) Sports technology

B) B) Traditional coaching

C) C) Basic equipment

D) D] Recreational sports

Question listening-q12

What distinctive characteristics does sports technology exhibit?

A) A) Real-time monitoring

B) B) Traditional methods

C) C) Basic observations

D) D] Simple measurements

Question listening-q13

What dynamics can lead to athletic improvement?

A) A) Performance optimization

B) B) Natural talent

C) C) Basic training

D) D] Traditional methods

Question listening-q14

How does sports technology insight generation differ?

A) A) Data integration

B) B) Observational analysis

C) C) Coach intuition

D) D] Athlete feedback

Question listening-q15

What becomes more complex in technological assessment?

A) A) Athlete assessment

B) B) Basic skills

C) C) Simple metrics

D) D] Traditional tests

Question listening-q16

What enables sophisticated performance prediction?

A) A) Machine learning

B) B) Coach experience

C) C) Basic statistics

D) D] Simple observation

Question listening-q17

What remains underdeveloped?

A) A) Ethical framework

B) B) Technology itself

C) C) Training methods

D) D] Athlete skills

Question listening-q18

What are increasingly blurred?

A) A) Coaching boundaries

B) B) Performance standards

C) C) Skill levels

D) D] Competition rules

Question listening-q19

What requires interdisciplinary collaboration?

A) A) Performance optimization

B) B) Basic training

C) C) Skill development

D) D] Competition preparation

Question listening-q20

What will receive greater attention?

A) A) Data governance

B) B) Basic training

C) C) Traditional methods

D) D] Simple equipment

Part 3: Discussion about sports psychology and mental performance

Script: {"narrator":"Now turn to Part 3. You will hear a discussion between a sports psychologist and a mental performance coach. Look at questions 21 to 30. You now have some time to look at the questions.\n...

Question listening-q21

What paradox does elite performance present?

A) A) Mental demands and growth opportunities

B) B) Physical and technical skills

C) C) Individual and team dynamics

D) D] Training and competition

Question listening-q22

What do mental skills training optimize?

A) A) Mental states

B) B) Physical conditioning

C) C) Technical skills

D) D] Tactical knowledge

Question listening-q23

What mechanism is important for performance enhancement?

A) A) Self-regulation

B) B) External motivation

C) C) Peer pressure

D) D] Coach feedback

Question listening-q24

What is becoming as crucial as physical conditioning?

A) A) Psychological resilience

B) B) Technical mastery

C) C) Tactical intelligence

D) D] Equipment quality

Question listening-q25

What do mental skills require across environments?

A) A) Consistent practice

B) B) Occasional training

C) C) Competition focus

D) D] Coach supervision

Question listening-q26

What must psychological support protect?

A) A) Athlete autonomy

B) B) Coach authority

C) C) Team standards

D) D] Organizational goals

Question listening-q27

What is crucial for athlete identity?

A) A) Balanced self-concept

B) B) Competitive focus

C) C) Performance obsession

D) D] Public recognition

Question listening-q28

What can make teams more effective?

A) A) Group cohesion

B) B) Individual talent

C) C) Strict discipline

D) D] Advanced tactics

Question listening-q29

What is essential for effective psychological support?

A) A) Cultural awareness

B) B) Technical knowledge

C) C) Scientific research

D) D] Professional credentials

Question listening-q30

What should athletes thrive in?

A) A) Their sports careers

B) B) Individual achievements

C) C) Team success

D) D] Public recognition

Part 4: Lecture on sports governance and organizational management

Script: {"narrator":"Now turn to Part 4. You will hear a lecture on sports governance and organizational management. Look at questions 31 to 40. You now have some time to look at the questions.\n\n[Pause]\n\n...

Question listening-q31

What provides insights into organizational effectiveness?

A) A) Sports governance

B) B) Coaching methods

C) C) Training systems

D) D] Athlete development

Question listening-q32

What explains organizational variation better?

A) A) Governance quality

B) B) Financial resources

C) C) Athlete talent

D) D] Facility quality

Question listening-q33

What do inclusive systems enable?

A) A) Sustainable development

B) B) Quick results

C) C) Centralized control

D) D] Individual success

Question listening-q34

What does centralized governance undermine?

A) A) Organizational integrity

B) B) Decision speed

C) C) Resource allocation

D) D] Performance outcomes

Question listening-q35

What presents a central puzzle?

A) A) Governance challenges

B) B) Performance issues

C) C) Financial problems

D) D] Talent development

Question listening-q36

What emphasizes critical incidents?

A) A) Historical analysis

B) B) Current practice

C) C) Future planning

D) D] Technical expertise

Question listening-q37

What fundamentally influences governance quality?

A) A) Decision-making power

B) B) Financial resources

C) C) Staff qualifications

D) D] Athlete performance

Question listening-q38

What do effective organizations require?

A) A) Leadership commitment

B) B) Financial investment

C) C) Technical expertise

D) D] Political support

Question listening-q39

What does governance reform require changing?

A) A) Formal and informal systems

B) B) Only formal structures

C) C) Only informal practices

D) D] Leadership personnel

Question listening-q40

What is essential for effective sports organizations?

A) A) Understanding governance dynamics

B) B) Implementing technical solutions

C) C) Following best practices

D) D] Adopting successful models

Writing

Writing Task 1

Prompt: undefined

The diagram compares the periodization model of athletic training with traditional continuous training. In the traditional model, athletes train at a steady level throughout the season without major changes in intensity or focus. This approach can lead to plateaus in performance and higher risk of fatigue or overtraining. In contrast, the periodization model divides training into different phases, each with a specific goal. At the beginning, athletes build a foundation with general fitness and lower intensity. Then the training gradually increases in intensity and focuses more on sport-specific skills. Near the competition period, athletes reach peak performance, and after that comes a recovery or transition phase to rest and prevent burnout. Overall, the periodization model offers a more structured and balanced plan that helps athletes develop progressively, reach their best form at the right time, and maintain long-term performance more effectively than continuous training

Writing Task 2

Prompt: undefined

Some people think that technology in sports has made things unfair and taken away the true human spirit of competition, while others believe it has helped athletes perform better and stay safer. On one hand, many argue that advanced equipment and technology such as high-tech shoes, special swimsuits, or data tracking systems give some athletes an advantage that others cannot afford. This can create inequality between rich and poor teams or countries, making success depend more on technology than on talent or hard work. They also believe that too much technology reduces the natural skill and emotion that make sports exciting and human, as decisions are now often made by machines like VAR or sensors instead of referees' judgment. On the other hand, supporters of sports technology believe that these advancements are positive because they help athletes train more effectively, avoid injuries, and perform at their best level. For example, motion analysis and smart wearables can monitor health and prevent serious problems, while new materials in sports gear improve comfort and protection. Technology has also made competitions fairer by reducing human errors in scoring and timing. In my opinion, technology should be used carefully but not rejected. It has brought many benefits that make sports safer and more professional, but it is important to keep clear rules so that no one gains an unfair advantage. As long as it is managed fairly, technology can support rather than destroy the human spirit in sports
