IELTS Level 4.6 Advanced Sports Science & Management Test - Test Results

Submission ID: mi2vllfba203lhs8j9l

Test Date: 2025-11-05

Submission Date: November 17th 2025, 3:21:40 pm

Test Summary

Grammar & Vocabulary:	16/20 (Band 8)
Reading:	18/30 (Band 6)
Listening:	39/40 (Band 9)
Writing:	20/20 (Band 9)
Overall IELTS Band Score:	**7**
Total Raw Score:	84.55/100
Time Spent:	24:35

Grammar & Language Use

Question 1

_____ sophisticated the sports technology, its effectiveness ultimately depends on proper implementation and athlete adherence.

A) However

B) Although

C) Despite

D] Because

Explanation: Concession with adjective

Question 2

The rehabilitation protocol, _____ on extensive research evidence, demonstrated excellent recovery outcomes.

A) predicating

B) predicated

C) having predicated

D] being predicated

Explanation: Past participle in reduced relative clause

Question 3

So profound _____ that traditional coaching methodologies require substantial adaptation.

A) has the sports science advancement been

B) the sports science advancement has been

C) was the sports science advancement

D] the sports science advancement was

Explanation: Inversion after 'so + adjective'

Question 4

The medical team recommended that concussion protocols _____ strictly followed in all contact sports.

A) is

B] be

C) was

D] has been

Explanation: Subjunctive after verbs of recommendation

Question 5

_____ the complex physiological demands of elite sport, recovery strategies must be individually tailored.

A) Giving

B) To give

C) Given

D] Having given

Explanation: Preposition meaning 'considering'

Question 6

The performance analysis system, _____ multiple data streams and algorithms, has revolutionized talent identification.

A] comprised

B] comprising

C] having comprised

D] being comprised

Explanation: Present participle in reduced relative clause

Question 7

So rapidly _____ that traditional development pathways require complete restructuring.

A] is sports technology evolving

B] sports technology is evolving

C] has sports technology evolved

D] sports technology has evolved

Explanation: Inversion after 'so + adverb'

Question 8

The sports federation insisted that ethical guidelines _____ rigorously applied across all programs.

A] are

B] be

C] were

D] have been

Explanation: Subjunctive after verbs of demand

Question 9

_____ the significant financial investments, sports technology adoption continues to demonstrate substantial returns.

A] Besides

B] Moreover

C] Notwithstanding

D] Therefore

Explanation: Formal preposition meaning 'despite'

Question 10

The athlete development framework, _____ through international research collaboration, has transformed training methodologies.

A] forging

B] having forged

C] being forged

D] forged

Explanation: Past participle in reduced relative clause

Question 11

So significant _____ that it has redefined sports performance boundaries.

A] has the advancement in sports medicine been

B] the advancement in sports medicine has been

C] was the advancement in sports medicine

D] the advancement in sports medicine was

Explanation: Inversion after 'so + adjective'

Question 12

The international committee demanded that safety standards _____ universally implemented.

A] be

B] is

C] was

D] has been

Explanation: Subjunctive after verbs of demand

Question 13

_____ the advanced monitoring systems, predicting athletic potential remains challenging.

A] Although

B] Because of

C] However

D] Despite

Explanation: Preposition for contrast

Question 14

The training methodology, _____ to maximize athletic potential, requires continuous scientific validation.

A] designing

B] having designed

C] being designed

D] designed

Explanation: Past participle in reduced relative clause

Question 15

So complex _____ that traditional coaching methods have proven insufficient.

A] have modern athletic demands become

B] modern athletic demands have become

C] became modern athletic demands

D] modern athletic demands became

Explanation: Inversion after 'so + adjective'

Question 16

The sports agreement requires that ethical standards _____ consistently maintained.

A] be

B] are

C] were

D] have been

Explanation: Subjunctive after verbs of requirement

Question 17

_____ the detailed performance analytics, implementation challenges remain significant.

A] Besides

B] Moreover

C] Therefore

D] Notwithstanding

Explanation: Formal preposition meaning 'despite'

Question 18

The coaching framework, _____ on motor learning principles, has achieved exceptional skill development.

A] predicating

B] having predicated

C] being predicated

D] predicated

Explanation: Past participle in reduced relative clause

Question 19

So rapidly _____ that traditional development systems struggle to keep pace.

A] is the sports technology landscape changing

B] the sports technology landscape is changing

C] has the sports technology landscape changed

D] the sports technology landscape has changed

Explanation: Inversion after 'so + adverb'

Question 20

The sports innovation mandate requires that research applications _____ immediately implemented.

A] be

B] are

C] were

D] have been

Explanation: Subjunctive after verbs of mandate

Reading

Passage 1: The Physiology of Endurance Sports

Endurance sports physiology represents a complex interplay of cardiovascular, respiratory, metabolic, and neuromuscular systems working in concert to sustain prolonged physical activity. The human body's capacity for endurance exercise hinges critically on oxygen delivery and utilization efficiency. VO2 max, the maximum rate of oxygen consumption during incremental exercise, serves as the primary benchmark for cardiovascular fitness, though its predictive value for performance varies across sports disciplines. Lactate threshold, the exercise intensity at which blood lactate concentration begins exponential rise, often proves more practically significant for endurance athletes, demarcating sustainable from unsustainable effort levels. Fuel substrate utilization evolves during prolonged exercise, with glycogen stores depleting and fat metabolism increasing proportionally. Thermoregulatory mechanisms maintain core temperature within narrow limits despite substantial heat production, with sweating and cutaneous blood flow serving as primary cooling strategies. Hydration status profoundly influences cardiovascular function, thermoregulation, and metabolic efficiency, with even modest dehydration impairing performance. Altitude training stimulates erythropoiesis through hypoxic exposure, enhancing oxygen-carrying capacity upon return to sea level. Overtraining syndrome represents the pathological extreme of inadequate recovery, characterized by performance decrements, mood disturbances, and immunological compromise. The gut plays increasingly recognized roles in endurance performance, influencing fuel availability, hydration, and immune function. Technological advances continue to refine our understanding of these physiological processes, enabling more precise training prescriptions and performance predictions.

Question reading-q1

What does endurance sports physiology represent?

A) A) Complex system interplay

B) B) Simple body functions

C) C) Basic muscle work

D) D] Single system operation

Question reading-q2

What hinges on oxygen delivery efficiency?

A) A) Basic strength

B) B) Endurance capacity

C) C) Simple speed

D) D] Traditional skills

Question reading-q3

What serves as the primary fitness benchmark?

A) A) Basic heart rate

B) B] Simple breathing

C) C] Traditional tests

D) D] VO2 max measurement

Question reading-q4

What proves practically significant for athletes?

A) A) Maximum speed

B) B] Basic strength

C) C] Simple endurance

D) D] Lactate threshold

Question reading-q5

What evolves during prolonged exercise?

A) A) Basic metabolism

B) B] Simple digestion

C) C] Traditional eating

D) D] Fuel substrate use

Question reading-q6

What maintains core temperature?

A) A) Basic cooling

B) B] Simple sweating

C) C] Traditional methods

D) D] Thermoregulatory mechanisms

Question reading-q7

What influences cardiovascular function significantly?

A) A) Basic drinking

B) B] Simple fluids

C) C] Traditional water

D) D] Hydration status

Question reading-q8

What does altitude training stimulate?

A) A) Basic adaptation

B) B] Simple adjustment

C) C] Traditional change

D) D] Erythropoiesis process

Question reading-q9

What represents pathological recovery inadequacy?

A) A) Basic tiredness

B) B] Simple fatigue

C) C] Traditional exhaustion

D) D] Overtraining syndrome

Question reading-q10

What plays roles in endurance performance?

A) A) Basic digestion

B) B] Simple stomach

C) C] Traditional eating

D) D] Gut function

Passage 2: Sports Law and Regulatory Frameworks

Sports law encompasses diverse legal domains intersecting with athletic competition, administration, and participation. Contract law governs athlete-team relationships, sponsorship agreements, and endorsement deals, with specialized considerations for unique sports industry dynamics. Intellectual property rights protect sports brands, broadcasting content, and athlete likenesses, generating substantial economic value in the sports ecosystem. Anti-doping regulations constitute a particularly complex international legal framework, with the World Anti-Doping Agency setting global standards that national organizations must implement. Athlete eligibility rules address nationality, age, and transfer regulations, balancing competitive fairness with mobility rights. Dispute resolution mechanisms, including arbitration and specialized sports tribunals, provide alternatives to conventional litigation for resolving sports-related conflicts. Liability issues arise regarding participant safety, spectator protection, and facility management, with negligence standards applying differently across sporting contexts. Employment law considerations include collective bargaining, free agency rights, and workplace safety standards tailored to athletic professions. Broadcasting rights agreements represent major revenue sources, involving complex negotiations over territorial exclusivity and digital distribution rights. Gambling regulations attempt to balance economic opportunities with integrity protection, addressing match-fixing risks and consumer protection concerns. Data protection laws gain increasing relevance with extensive athlete biometric monitoring and fan data collection. International sports governance involves complex jurisdictional questions as sports organizations operate across national boundaries while maintaining autonomous regulatory authority.

Question reading-q11

What does sports law encompass?

A) A) Diverse legal domains

B) B) Simple rules

C) C] Basic regulations

D) D] Traditional laws

Question reading-q12

What governs athlete-team relationships?

A) A) Basic agreements

B) B] Simple deals

C) C] Traditional handshakes

D) D] Contract law principles

Question reading-q13

What protects sports brands economically?

A) A) Basic trademarks

B) B] Simple logos

C) C] Traditional names

D) D] Intellectual property rights

Question reading-q14

What sets global anti-doping standards?

A) A) Basic organizations

B) B] Simple committees

C) C] Traditional groups

D) D] World Anti-Doping Agency

Question reading-q15

What do athlete eligibility rules address?

A) A) Basic skills

B) B] Simple abilities

C) C] Traditional training

D) D] Nationality and age

Question reading-q16

What provides alternative dispute resolution?

A) A) Basic courts

B) B] Simple judges

C) C] Traditional lawyers

D) D] Arbitration systems

Question reading-q17

What issues arise regarding safety?

A) A) Basic risks

B) B] Simple dangers

C) C] Traditional hazards

D) D] Liability concerns

Question reading-q18

What includes collective bargaining?

A) A) Basic agreements

B) B] Simple deals

C) C] Traditional contracts

D) D] Employment law considerations

Question reading-q19

What represent major revenue sources?

A) A) Basic tickets

B) B] Simple sales

C) C] Traditional income

D) D] Broadcasting rights

Question reading-q20

What attempts to balance opportunities with integrity?

A) A) Basic rules

B) B] Simple laws

C) C] Traditional standards

D) D] Gambling regulations

Passage 3: Motor Learning and Skill Acquisition

Motor learning science investigates the processes through which humans acquire and refine movement skills, with profound implications for sports coaching and athletic development. The distinction between performance and learning represents a fundamental principle—observable execution during practice reflects temporary performance, while relatively permanent capability changes constitute learning. Skill acquisition typically progresses through cognitive, associative, and autonomous stages, each characterized by distinct attention demands and error patterns. Practice structure significantly influences learning efficiency, with variable practice enhancing long-term retention compared to constant repetition. Contextual interference, introducing skill variations within practice sessions, initially impedes performance but ultimately strengthens learning through enhanced cognitive processing. Feedback mechanisms guide skill refinement, with bandwidth feedback proving more effective than constant correction for developing error detection capabilities. Observational learning enables skill acquisition through modeling, with expert demonstrations providing cognitive blueprints for movement execution. Mental practice activates similar neural pathways as physical execution, facilitating skill development without physical fatigue. The challenge point framework suggests optimal learning occurs when task difficulty appropriately challenges current capability levels. Dynamic systems theory emphasizes the interaction between organism, task, and environment

constraints in shaping movement solutions. Differential learning approaches exploit movement variability rather than seeking perfect repetition, recognizing that optimal technique emerges through exploration. Technology-enhanced learning tools, including video analysis and biofeedback systems, provide augmented information for accelerated skill acquisition. Understanding these motor learning principles enables coaches to design more effective training interventions that optimize long-term skill development.

Question reading-q21

What does motor learning science investigate?

A) A) Skill acquisition processes

B) B) Basic movements

C) C] Simple actions

D) D] Traditional exercises

Question reading-q22

What represents a fundamental principle?

A) A) Basic practice

B) B] Simple training

C) C] Traditional methods

D) D] Performance vs learning distinction

Question reading-q23

How does skill acquisition typically progress?

A) A) Through basic steps

B) B] Through simple phases

C) C] Through traditional levels

D) D] Through defined stages

Question reading-q24

What influences learning efficiency significantly?

A) A) Basic repetition

B) B] Simple copying

C) C] Traditional following

D) D] Practice structure design

Question reading-q25

What initially impedes but strengthens learning?

A) A) Basic difficulty

B) B] Simple challenges

C) C] Traditional obstacles

D) D] Contextual interference

Question reading-q26

What guides skill refinement effectively?

A) A) Basic correction

B) B] Simple advice

C) C] Traditional instruction

D) D] Feedback mechanisms

Question reading-q27

What enables acquisition through modeling?

A) A) Basic watching

B) B] Simple viewing

C) C] Traditional seeing

D) D] Observational learning

Question reading-q28

What activates similar neural pathways?

A) A) Basic thinking

B) B] Simple imagination

C) C] Traditional visualization

D) D] Mental practice sessions

Question reading-q29

What suggests optimal learning conditions?

A) A) Basic difficulty

B) B] Simple challenge

C) C] Traditional standards

D) D] Challenge point framework

Question reading-q30

What emphasizes organism-task-environment interaction?

A) A) Basic principles

B) B] Simple concepts

C) C] Traditional ideas

D) D] Dynamic systems theory

Listening

Part 1: Discussion about sports medicine and injury prevention

Script: {"narrator":"Now turn to Part 1. You will hear a conversation between a sports physician and a rehabilitation specialist. Look at questions 1 to 10. You now have some time to look at the questions.\n\...

Question listening-q1

What has moved beyond traditional rehabilitation methods?

A) A) Contemporary injury management

B) B) Basic first aid

C) C) Traditional massage

D) D] Simple exercises

Question listening-q2

What has demonstrated limitations in return to sport?

A) A) Comprehensive rehabilitation

B) B) Isolated treatment approach

C) C) Advanced technology

D) D] Team-based care

Question listening-q3

What does modern sports medicine emphasize?

A) A) Active rehabilitation protocols

B) B) Passive recovery methods

C) C) Rest periods only

D) D] Medication focus

Question listening-q4

What model has been transformative?

A) A) Traditional medical model

B) B) Biopsychosocial model

C) C) Simple biological model

D) D] Isolated treatment model

Question listening-q5

What significantly influences rehabilitation outcomes?

A) A) Only physical healing

B) B) Medication types

C) C) Psychological factors

D) D] Equipment quality

Question listening-q6

What programs address risk factors before injury?

A) A) Basic training

B) B) Recovery protocols

C) C) Prehabilitation programs

D) D] Surgical interventions

Question listening-q7

What represents a critical advancement in injury risk?

A) A) Random training

B) B) Intensity only

C) C) Load management

D) D] Volume focus

Question listening-q8

What provides objective data for decision-making?

A) A) Coach opinions

B) B) Athlete feelings

C) C) Basic observations

D) D] Wearable sensors

Question listening-q9

What do multidisciplinary teams utilize?

A) A) Guesswork

B) B) Time only

C) C) Individual opinions

D) D] Standardized testing

Question listening-q10

What has gained appropriate emphasis?

A) A) Short-term wins

B) B) Immediate performance

C) C) Competition results

D) D] Long-term athlete health

Part 2: Lecture on sports marketing and fan engagement

Script: {"narrator":"Now turn to Part 2. You will hear a lecture on sports marketing and fan engagement. Look at questions 11 to 20. You now have some time to look at the questions.\n\n[Pause]\n\nNow listen c...

Question listening-q11

What has undergone revolutionary changes?

A) A) Sports marketing landscape

B) B) Basic sports rules

C) C) Traditional training

D) D] Simple equipment

Question listening-q12

What are traditional models being supplemented by?

A) A) Radio broadcasts

B) B) Digital streaming platforms

C) C) Print media

D) D] Word of mouth

Question listening-q13

What do modern sports fans expect?

A) A) Basic viewing

B) B) Simple updates

C) C) Immersive experiences

D) D] Traditional coverage

Question listening-q14

What has become paramount in fan engagement?

A) A) Standardization

B) B) Generalization

C) C) Traditional methods

D) D] Personalization

Question listening-q15

What enables tailored content delivery?

A) A) Guesswork

B) B) Random selection

C) C) Basic intuition

D) D] Data analytics

Question listening-q16

What have sponsorship models evolved into?

A) A) Simple logos

B) B) Basic advertisements

C) C) Traditional signs

D) D] Integrated partnerships

Question listening-q17

What has created new marketing paradigms?

A) A) Traditional sports

B) B) Basic games

C) C) Esports emergence

D) D] Simple competitions

Question listening-q18

How are stadium experiences being reimagined?

A) A) As basic venues

B) B) As simple stands

C) C) As traditional fields

D) D] As technology hubs

Question listening-q19

What has become integral to marketing strategies?

A) A) Profit only

B) B) Basic advertising

C) C) Simple promotions

D) D] Social responsibility

Question listening-q20

What has emerged as critical considerations?

A) A) Basic marketing

B) B) Simple advertising

C) C) Traditional methods

D) D] Data privacy ethics

Part 3: Discussion about sports sociology and cultural impact

Script: {"narrator":"Now turn to Part 3. You will hear a discussion between a sports sociologist and a cultural analyst. Look at questions 21 to 30. You now have some time to look at the questions.\n\n[Pause]...

Question listening-q21

What do sports function as in society?

A) A) Social microcosms

B) B) Simple games

C) C) Basic entertainment

D) D] Isolated activities

Question listening-q22

What has commercialization created intersections with?

A) A) Simple economics

B) B) Basic trade

C) C) Traditional markets

D) D] Capitalism systems

Question listening-q23

What becomes commodified in modern sports?

A) A) Basic skills

B) B) Simple playing

C) C) Athletic achievement

D) D] Traditional values

Question listening-q24

What has dramatically altered sports landscapes?

A) A) Local traditions

B) B) Basic rules

C) C) Simple changes

D) D] Globalization forces

Question listening-q25

What has the digital revolution amplified?

A) A) Basic communication

B) B) Simple messaging

C) C) Traditional media

D) D] Social dynamics

Question listening-q26

What do sports serve as for social change?

A) A) Simple tools

B) B) Basic methods

C) C) Traditional approaches

D) D] Powerful platforms

Question listening-q27

What significant challenges persist in sports?

A) A) Basic rules

B) B) Simple equipment

C) C) Traditional methods

D) D] Racial discrimination

Question listening-q28

What does sports psychology study about fandom?

A) A) Basic watching

B) B] Simple cheering

C) C] Traditional support

D) D] Identity and community

Question listening-q29

What can major sporting events drive?

A) A] Basic activities

B) B] Simple gatherings

C) C] Traditional meetings

D) D] Economic development

Question listening-q30

What does understanding sports require examining?

A) A] Basic rules

B) B] Simple games

C) C] Traditional plays

D) D] Social contexts

Part 4: Lecture on sports technology and innovation

Script: {"narrator":"Now turn to Part 4. You will hear a lecture on sports technology and innovation. Look at questions 31 to 40. You now have some time to look at the questions.\n\n[Pause]\n\nNow listen care...

Question listening-q31

What continues to reshape sports performance?

A) A) Technological innovation

B) B) Basic training

C) C) Simple methods

D) D] Traditional approaches

Question listening-q32

What represents the current frontier in sports technology?

A) A) Basic computers

B) B] Simple devices

C) C] Traditional tools

D) D] Artificial intelligence

Question listening-q33

What does AI enable in sports?

A) A) Basic calculations

B) B] Simple counting

C) C] Traditional measurements

D) D] Predictive analytics

Question listening-q34

What has wearable technology evolved into?

A) A) Basic trackers

B) B] Simple watches

C) C] Traditional pedometers

D) D] Biometric monitoring systems

Question listening-q35

What are virtual reality technologies transforming?

A) A] Basic exercises

B) B] Simple practices

C) C] Traditional methods

D) D] Training environments

Question listening-q36

What do materials science advancements produce?

A) A] Basic gear

B) B] Simple tools

C) C] Traditional items

D) D] Improved equipment

Question listening-q37

What have data analytics platforms become for talent identification?

A) A] Basic helpers

B) B] Simple aids

C) C] Traditional methods

D) D] Indispensable tools

Question listening-q38

What does the Internet of Things connect?

A) A] Basic devices

B) B] Simple tools

C) C] Traditional equipment

D) D] Monitoring systems

Question listening-q39

What do biotechnology interventions offer?

A) A] Basic improvements

B) B] Simple changes

C) C] Traditional benefits

D) D] Performance optimization

Question listening-q40

What has emerged as a critical concern?

A) A] Basic safety

B) B] Simple security

C) C] Traditional protection

D) D] Cybersecurity issues

Writing

Writing Task 1

Prompt: undefined

The chart shows how training load affects recovery time and injury risk in elite athletes, and it highlights a clear pattern. When training load is low, recovery time stays short and injury risk remains minimal. As the training load increases to a moderate level, recovery time becomes noticeably longer and the injury risk rises steadily, but it is still manageable. However, once the training load reaches a high or excessive level, both recovery time and injury risk increase sharply. At this point, athletes need much more time to recover, and the chance of getting injured becomes very high. The comparison shows that injury risk grows faster than recovery time, especially at the highest training levels. Overall, the chart suggests that while moderate training can be beneficial, pushing training load too far leads to a rapid rise in physical stress, making proper load management

essential for maintaining athlete health and performance

Writing Task 2

Prompt: undefined

Some people think professional sports have become too commercialized, and this has caused them to lose their original spirit. They argue that sports used to be about passion, community, and fair play, but now money plays the biggest role. Big companies sponsor almost everything, athletes sign huge contracts, and ticket prices become so high that many ordinary fans cannot afford to watch games live. They feel that the focus has shifted from teamwork and love for the sport to profit, advertising, and business deals. Because of this, the sense of connection between athletes and the community has weakened, and many traditions have faded. On the other hand, some people believe commercialization has actually made sports better and more accessible. With more money, teams can invest in better coaches, training facilities, and technology, which improves athlete performance and match quality. Commercialization also allows sports to be broadcast worldwide, so millions of people can watch games for free or at low cost. Sponsorships help athletes from poor backgrounds get support, and large events create jobs and boost local economies. From this perspective, commercialization helps sports grow, reach more fans, and offer higher entertainment value. In my opinion, both views have some truth. Commercialization has brought problems, especially when money becomes more important than the sport itself. However, it has also helped sports develop in ways that would not be possible without financial support. I think the key is balance. Sports should keep their heart and community spirit, but still accept some level of commercialization to improve quality and give more people the chance to enjoy and participate in them
